

Industrial & Electrical Components

Shunt Resistor

Part No.

Type N1

A. Application:

Serving in all kinds of electrical meters/energy meters/measurement instruments as power measurer.

B. Feature:

a) Electrical:

- Material: F2 or 6J13 Manganin and pure copper.
- Welding mode: Electro-beam welding.
- Resistance value: 200,250,300,350,400,500,600,800,1000,1200,1600 $\mu \Omega$.
Tolerance standard: $\pm 5\%$
- Shunt type: The shunt should be mountable type with holes for screw fixing
- Termination: Integrated lead wires are available.
- Temperature: Independent from temperature variation with low TCR value.
Characteristics TC < 50PPM/K
- Power loss: < 50 milli watt
- Aging: 10 hours under 120 deg.
- Customized designs are available against customer's drawings/samples.

b) Mechanical (mm)
